

# Ingham Wound Care & Hyperbaric Center

*Healing chronic wounds more quickly with the region's first hyperbaric chamber*

## Why Ingham Wound Care & Hyperbaric Center?

- Our center has the region's first hyperbaric chamber for faster healing.
- Unlike other centers, our patients see a doctor at every visit.
- Under our treatments, almost 90 percent of all wounds heal in an average of 44 days.

If you have a sore or wound that has not improved significantly after four weeks, or has not healed entirely after eight weeks, then ask your doctor to refer you to Ingham Wound Care & Hyperbaric Center.

*Take charge of your wound and start living your life!*

*During a hyperbaric oxygen treatment, the patient breathes 100 percent oxygen inside a pressurized chamber. This treatment delivers high concentrations of oxygen to the bloodstream, assisting in the wound healing process. A treatment profile is administered daily, and the number of treatments depends on the diagnosis.*

## We Heal Chronic Wounds More Quickly

If you are suffering from a nonhealing wound, you are not alone. Every year, chronic wounds caused by diabetes, poor circulation and other conditions keep three to five million Americans from doing the things they love.

Our experienced team at Ingham Wound Care & Hyperbaric Center is dedicated to treating wounds, especially those that have resisted healing by traditional treatments. In addition, eligible patients have access to the region's only hyperbaric oxygen therapy program.

We have treated more than 5,000 wounds since 2002, and 90 percent of all wounds we treat heal in an average of 44 days.

### **We Specialize in Treating:**

- Burns
- Bites
- Pressure, decubitous and venous ulcers
- Weeping extremities
- Nonhealing surgical wounds
- Postoperative surgical complications/infections
- Diabetic foot wounds
- Chronic wounds
- Any open sore resistant to healing

### **Your First Visit**

On your first visit to Ingham Wound Care & Hyperbaric Center, our friendly staff will evaluate your wound, your general health and your medical history. Depending on your situation, you may also require additional noninvasive tests to provide information about blood flow to the affected area. Unlike other programs, you will meet or consult with a doctor every visit.

### **Your Healing Program**

We will develop a treatment program based on your individual needs. Your healing program will include regular visits for treatment and progress evaluation. We will make any changes needed to improve your healing process.

We incorporate a wide range of specialists as we develop your healing program. From primary care physicians to podiatrists, nutritionists to physical therapists, we will call on any service that we feel can advance your healing process.

Additionally, you (or you caregiver) will be given detailed instructions on providing home care, changing dressings and protecting the wound from further injury.

### **Your Vital Role**

Much of the success of your treatment depends on you. The rate of healing success increases significantly when you keep your appointments, follow directions carefully and watch your progress closely between visits.

We encourage you to ask questions, and our staff is available to answer any questions you or your caregiver may have.

### **We Work with Your Physician**

Ingham Wound Care & Hyperbaric Center works with your personal physician, just like any other medical specialist. We will discuss your treatment program with your doctor and keep him or her updated on your progress. Remember, you will need to keep seeing your physician for routine medical care.

### **Insurance Coverage**

Many health plans, including Medicare, cover treatments at Ingham Wound Care & Hyperbaric Center. Your coverage depends on your specific plan. Be sure to bring your insurance card with you when you visit our center.
